DETAILED ACTION

Response to Amendment

1. Applicant's amendment and argument filed on 08/04/05 are received and entered into record.
2. The objection of the drawings is withdrawn per the remark of the applicant.
3. The claim rejection regarding of claim 1, 3, 4, and 5 under 35 U.S.C. §102 (b) is withdrawn as applicant amendment has overcome the rejection set-forth in the earlier office action.
4. The claim rejections of claims 2, 6, and 7 are withdrawn as the claims depend directly or indirectly on the independent claim 1 and since claim 1 is amended to overcome the claim rejection set-forth in the earlier office action.
5. Claim rejections of claims 10, 12, and 13 are withdrawn as the claims are cancelled by the amendment.

Allowable Subject Matter

6. Claims are 1-9, 11, and 14-22 allowed.
7. The following is a statement of reasons for the indication of allowable subject matter:
 - Yamane (US 5,748,206) shows a printer that teaches about a method of controlling the speed of the carriage. The method involves measuring the speed of the carriage in the first cycle and adjusting the PWM in the next cycle.
 - Igarashi (US 2003/0043228) shows a carriage motor control in a printer. The disclosure teaches how the speed differential could be calculated and

is supplied to different control parts to efficiently control the carriage motor.

- Regarding claim 1, however, none of the prior arts alone or in combination showed or taught the specific method/system that are found in independent claim 1. The primary reason for allowance is the constant speed control method with the following steps:

*the control device controls operation of the carriage using a first set of the plurality of sets of parameters and detects a **first behavior of the carriage in a constant speed area**,*

*after controlling the operation of the carriage using the first set of the plurality of sets of parameters, the control device controls operation of the carriage using a second set of the plurality of sets of parameters and **detects a second behavior of the carriage in the constant speed area**, and*

after controlling the operation of the carriage using at least the first set and the second set of the plurality of sets and the second set of the plurality of sets of parameters, the control device selects one of the plurality of sets of parameters based on the detected first behavior and the detected second behavior.

Regarding claim 15 and 20, the following steps are the reason for allowance of the claims:

*Executing a plurality of driving operations of the carriage using different ones of the plurality of sets of parameters for each of the plurality of driving operations; detecting a plurality of behaviors of the carriage **in a constant speed area during each of the plurality of driving operations;** selecting one of the plurality of sets of parameters based on the plurality of detected behaviors corresponding to **at least two of the plurality of driving operations;** and controlling the motor for driving the carriage based on the selected one of the plurality of sets of parameters.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Remarks

1. Nineteen claims are allowed.
